I recently took this book out from my local library and quickly realized that I needed to own a copy. We purchased an old house circa 1890 and this book has been the most valuable and informative resource that I have found. I have had countless electricians, contractors, plumbers, roofers, etc. come through the house, leaving me more confused than ever! This book explained, in easy to understand terms all of the questions I had bouncing around my head! Our knob and tube electric

system (partially updated) frightened me. The chapter on electricity explained not only how it works, but what needed to be done to update it. Basically this book covered every topic that I needed help with and more!

This is the best book that I have come accross about retoring one's historic home. I'm not a contractor, so I'm not going to perform the work myself but, I do want to know about the history of the house and how to locate that information. He gives you sites to explore in your local community that will help with that endeavor. A must have in any library to know more about the history of your house and what is important in perserving your house or any structure that you are trying to preserve.

I bought this book thinking it was going to be the ideal book on the restoration of my old homested, but found it didn't cover as much as I thought it would. It goes into so many different directions when explaining something that you kind of lose your place. There are a few really good parts and others are so so. The photos are hand drawn and so small at times you really can't seem to figure them out. The author really does know what he is doing, but needs to be more direct in his approach and show more detailed and easy to follow directions. Overall I rate this book as OK.
